Table 6 Schedule of Savings Reserve Account Balance, 1990-91 to 2017-18, Recommended 2018-19

a) The General Assembly appropriated \$141.0 million; the reserve was used to balance a shortfall in revenue in 1999-91

b) The 1993 Session of the General Assembly authorized the transfer of reserves to support appropriation for the June 30 payroll restoration.

c) The 1993 Session of the General Assembly (1994 Regular Session) appropriated \$66.7 million to the reserve.

d) The 1999 Session of the General Assembly fixed the balance of the reserve for 1998-99 only at the previous year level.

e) The 1999 Session of the General Assembly authorized the use of the Savings Reserve Account to pay the first installment of the Intangibles Tax liability. The December 1999 Special Session of the General Assembly authorized the transfer of \$285,965,824 to provide funds to the Hurricane Floyd Reserve.

f) The 2000 Short Session of the General Assembly appropriated \$120 million to the reserve.

g) The 2001 Session of the General Assembly directed the State Controller to "credit" the Savings Reserve Account \$181.8 million from the General Fund but only \$90,000,000 was credited.

h) Amount transferred to Disaster Relief Reserve for 2004 Hurricane Season Recovery, per SB 7.

i) Reflects \$23.3 million transferred to the Highway Fund and the Highway Trust Fund to Replace motor fuel tax revenues reduced by the cap on the gas tax rate per Senate Bill 1741.

j) Reflects \$100,928,370 transferred due to the Disaster Recovery Act of 2016-S.L. 2016-124, HB 2 Hurricane Matthew and Western Wildfires

Table 7 Total Budget for Debt Services, 1980-81 to 2016-17; Recommended 2017-18

* Based on July 1 population estimates.

a) Does not include \$38 million appropriation to pay off Wilmington Harbor Navigation 96 Act Project

b) Does not include \$22 million appropriation to pay off Wilmington Harbor Navigation 96 Act Project

c) Does not include \$22 million appropriation to pay off Wilmington Harbor Navigation 96 Act Project

Budget and Economic Outlook, Revenue Forecasts, and Demographic Analysis

Economic Outlook Strong Economic Fundamentals in a Slow Recovery

The current economic recovery is slower compared to previous recoveries on several metrics. Annual state real GDP growth has increased by 1.6% in the current expansion compared to 3.0% in the 2001-2007 expansion and 4.6% in the 1991-2001 expansion. Annual real per capita wage growth has lagged the 1991-2001 expansion. Population continues to grow, but at a slower rate compared to the previous two recoveries. However, in this slowly expanding economy, North Carolina is demonstrating strong economic fundamentals.

NC's Labor Market Keeps Tightening

The labor market in North Carolina continues to inch toward full employment and show signs of labor market tightening. The unemployment rate stayed consistent in the last half of 2017, falling to 4.4% in the third quarter of 2017 and rising slightly to 4.5% in the fourth quarter.¹ Although North Carolina's unemployment rate continues to be higher than most of its neighbors (South Carolina, Tennessee, and Virginia), unemployment rates across the entire nation are low and, in most cases, below pre-recession levels. Broader measures of unemployment, which include so-called "marginally attached" workers and part-time workers who would rather work full time, have also reached pre-recession lows. As North Carolina joins most of its neighbors in surpassing the nation on employment gains from pre-recession levels, workers are becoming more confident in the strength of the economy. Data from the Job Openings and Labor Turnover Survey (JOLTS) shows further evidence of confidence in the labor market as hire and quit rates have increased for the Southern region.

Labor force participation in North Carolina has been gradually increasing since 2014 (from 61.1% to 61.4% in December 2017) driven by a higher rate of labor force growth compared to the civilian population. This is a deviation from trend as labor force participation has been decreasing since 2000, and is forecast to continue to do so nationwide. Factors contribut-

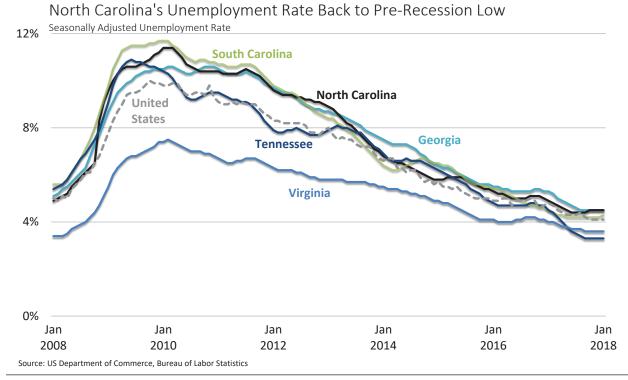

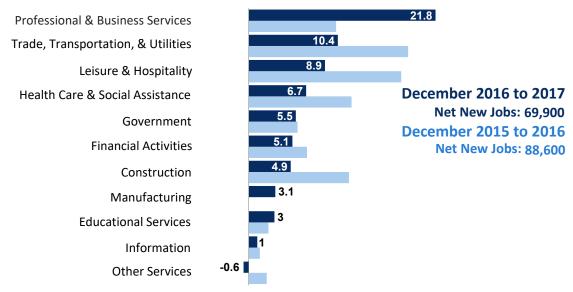

Figure 3

ing to the downward trend include an aging population and increasing school enrollment. The labor force growing faster than the population points to brighter employment prospects encouraging many of the state's potential workers who dropped out of the labor force, or delayed (re-) entry, in the aftermath of the Great Recession to rejoin the labor force.

Job Growth Driven by Professional and Business Services Affects State Unevenly

North Carolina's economy continued to generate jobs for the eighth straight year.² Total nonfarm payroll increased by 1.6% in 2017 – slightly lower than the average percentage increase over the past eight years. Job creation was lower compared to 2016, but remained concentrated in service-providing industries. Professional and Business Services remained the strongest creator of job growth, accounting for 31% of new jobs. Construction and Manufacturing were the two sectors hardest hit by the Great Recession; employment in these sectors remains well below prerecession levels, as well as below the national recovery trend, despite an uptick in manufacturing employment during 2017.

While labor market conditions remain quite strong for North Carolina as a whole, recovery from the recession has been unevenly felt across the state (Figure 5). Because service-providing industries have driven job growth since the Great Recession, areas that had larger concentrations of harder hit goodsproducing industries have not fared as well in terms of job creation. Rocky Mount had a larger concentration of manufacturing jobs that have not recovered, while Goldsboro experienced a brief resurgence in goods-producing industries in 2012 before those jobs also went away. While the Triad was also hit particularly hard by the Great Recession and job growth remains slightly below pre-recession levels, employment has been slowly recovering.

² All figures mentioned in this section, unless otherwise noted, refer to statistics from the federal-state Current Employment Statistics program of the Bureau of Labor Statistics. Note that all figures are subject to revision.

Job Growth Strongest in Triangle & Charlotte, Many Areas Still Struggling

Data Source: U.S. Department of Commerce, Bureau of Labor Statistics. Rest-of-state includes Hickory, Jacksonville, Burlington, and Fayetteville as well as non-metro areas.

Fostering job growth and economic opportunities in areas that have yet to recover from the Great Recession remains a challenge facing the state's economy. However, there are still signs of progress across most of North Carolina as the year-over year unemployment rate fell for nearly every county in North Carolina by an average of 0.5%. The number of counties with unemployment rates at or above 7.0% fell by half compared to December 2016, but 53 counties still have rates above the state's 2017 annual average of 4.6%.³

Tighter Labor Market Spurs Wage Growth

North Carolina and most of its neighboring states reached pre-recession per capita wage and salary levels in 2016 and growth has continued throughout 2017. Adjusted for inflation, median wage growth in North Carolina since 2009 has increased 2.6%.⁴ But, just as job recovery has been felt unevenly across the state, workers in different income categories have experienced varying wage growth. Most of the wage gains in this recovery have been concentrated among higher earners, more so than in neighboring states (Figure 6).

Despite the distributional impacts of wage gains, the overall income picture is positive. Personal income grew by 3.8% in 2017, compared to a national average of 3.1%.⁵ Real median household income (including all sources of income, not just wages) exceeded pre-recession levels for the first time in 2015.⁶ Growth continued in 2016 reaching the highest level in the past 20 years (\$53,764), 6.7% above the 2007 level.

Risks in the Economy

As of May 2018, the current economic expansion is the 2nd longest in Post-WWII history. If the current expansion continues beyond June 2019 it will be the longest in modern history. Economic fundamentals remain strong, and many economists continue to place a low probability (around 15%) on an imminent recession, remaining more optimistic compared to 2016.⁷ Still, there are potential concerns that point to headwinds: home prices in North Carolina are well above the pre-recession peak (9.8% higher),⁸ and have risen faster than incomes; total household debt has been growing since mid-2013 and reached a new peak in the last quarter of 2017, increasing to \$13.15 trillion nationally; defaults on car loans have increased;⁹ and personal savings rates fell to a 12-year low in December.¹⁰

General Fund Revenue Forecast

About half of North Carolina's total revenue originates from tax collections and other sources comprising the General Fund. The other half consists of funds from the federal government, highway funds, the Education Lottery, and other receipts and fees (e.g., tuition). General Fund own-source revenues are primarily derived from two sources: the individual income tax and the sales and use tax. Other important sources of tax revenue include corporate income and franchise taxes, taxes on insurance premiums, and excise taxes on alcohol and tobacco products. In addition, nontax revenue, such as judicial fees and earnings from investing state funds, supports the General Fund.

Figure 7

Individual Income & Sales Taxes Comprise Vast Majority of Own-Source General Fund Revenue

FY 2017-18 General Fund Revenues - May 2018 Revised Consensus

The consensus revenue forecast anticipates steady economic and revenue growth over the remainder of the 2017-19 biennium. Specific highlights of the forecast include:

Current Year Revenue

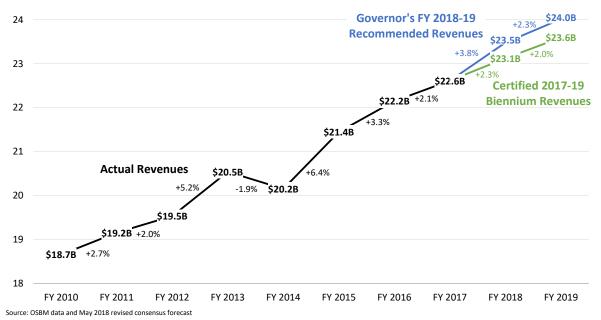

The revised consensus forecast projects net General Fund revenue of \$23.48 billion in FY 2017-18. This amount is 3.8% over the \$22.61 billion collected in FY 2016-17 (see table 8). The revised consensus projection is \$356.7 million (1.5%) higher than the budgeted amount of \$23.13 billion, which is below the median forecast error since 1987.

 Personal income tax collections are expected to total \$12.54 billion in FY 2017-18, an increase of \$568 million (4.7%) over FY 2016-17 levels. The revised consensus forecast for current-year personal income tax collections represents an increase in expected revenue of \$196 million (1.6%) due primarily to higher-than-expected quarterly payments, particularly in December and January, as taxpayers responded to new limits on deductions in the Tax Cuts and Jobs Act by shifting state income tax payments into tax year 2017. The significant rise in stock market valuations during second half of the 2017 calendar year also contributed to the upward revision.

Sales and use tax collections, which comprise nearly one-third of General Fund revenue, are forecast to increase 3.7% or \$258 million compared to FY 2016-17. This represents a downward revision of 1.0%, or \$72 million, compared to budget, driven primarily by lower-than-expected growth in taxable retail sales.

General Fund Revenue: Recent History & Forecast

Billions of Current-Year Dollars

While the forecast for the remainder of FY 2017-18 only includes two additional months of revenue collections, revenue volatility remains a risk. An increase or decrease in late income tax filings and/or unexpected large income or sales tax refunds could cause deviations from anticipated year-end revenues. The likelihood of unexpected payments or refunds in May and June may be higher than normal due to taxpayer responses to recent federal tax changes.

Revenue Outlook for 2018-19 Fiscal Year

Reflecting a cautious outlook, the forecast for FY 2018-19, adjusted for recommended revenue changes, will increase a modest 2.3%, which is below long-term average growth during economic expansions. Table 8 details this forecast adjusted for recommended revenue changes.

 Personal income tax collections, which account for more than half of General Fund revenues, are expected to equal \$12.80 billion in FY 2018-19, an increase of 2.1% compared to revised consensus FY 2017-18 revenues. Personal income tax collections for FY 2018-19 are revised upward by \$287 million compared to the budgeted amount, after accounting for recommended revenue changes. Projected year-over-year growth in baseline personal income tax revenues during FY 2018-19, resulting from rising wages, a substantial increase in shareholder dividends and stock buybacks in early 2018, and an economy that continues to expand, will be offset by tax reductions, including a tax rate decrease and an increase in the standard deduction.

- Sales and use tax collections are expected to be \$7.62 billion in FY 2018-19. Growth in consumer spending is expected to remain moderate over the rest of the biennium due to flat energy prices and stable consumer confidence. This economic outlook combined with growth from recently enacted revenue changes translates into 5.0% growth in sales and use tax collections, despite the \$75 million downward revision from the budgeted level.
- Corporate income tax collections are expected to be \$721 million in FY 2018-19, a decrease of \$13 million (-1.7%) compared to FY 2017-18. Anticipated revenues are \$24 million (3.4%) above the budgeted amount for FY 2018-19, after accounting for recommended revenue changes.
- Franchise tax collections are expected to be \$684 million in FY 2018-19, a small year-over-year decrease of \$3 million (-0.4%) compared to FY 2017-18. The small decrease reflects the impact of previously enacted tax changes.

While the General Fund forecast cautiously assumes below-trend baseline growth, there are still risks to the forecast. Recent spikes in stock market volatility, potential economic imbalances associated with a nearly decade-long economic expansion, federal policy uncertainty, and growing household debt are among sources of risk to the consensus forecast. In addition, recent tax changes at both state and federal levels heighten revenue volatility risks.

Recommended Revenue Changes

- Create two individual income tax brackets The Governor recommends creating an additional rate bracket for income over \$200,000 for married filing jointly taxpayers (\$100,000 for singles, \$150,000 for head of household). This bracket would would affect fewer than one in 20 resident filers in North Carolina and raise an estimated \$68 million in FY 2018-19 and \$153 million in FY 2019-20.
- Freeze the corporate income tax rate at 3.0% The Governor recommends freezing the corporate income tax rate at 3.0% for tax years beginning on or after January 1, 2019. This rate is lower than the top rate of all other states that levy a corporate income tax. This provision would raise an estimated \$42 million in FY 2018-19 and \$129 million in FY 2019-20.
- Refocus the current film grant program and add a film & entertainment tax incentive rebate program

 The Governor recommends refocusing the current film grant program toward small, independent productions and commercials, and capping the whole program at \$2.5 million per year (\$250,000 per project). The rebate program would target larger productions and provide an incentive of 25% of qualified spending up to caps of \$15 million for television series, \$5 million for films, and \$250,000 for grants for commercials. The rebate is estimated to decrease revenue by approximately \$33 million starting in FY 2019-20.
- Earmark 25% of real estate conveyance tax for trust funds – The Governor recommends earmarking 25% of net real estate conveyance tax revenue and allocating that amount to the following funds: the Clean Water Management Trust Fund (35%), the Parks and Recreation Trust Fund (35%), the Farmland Preservation Trust Fund (15%), and the North Carolina Housing Trust Fund (15%). This has an estimated general fund revenue impact of -\$19 million starting in FY 2018-19.

Highway Fund Revenue Forecast

Revised Estimates for the 2017-19 Biennium

The Highway Fund receives support from three revenue sources. The primary source is the excise tax on motor fuels, of which the Highway Fund receives 71%. The second source is licenses and fees collected by the Division of Motor Vehicles. The third source is interest earned on investments of Highway Fund cash balances held by the State Treasurer and dividend payments from the NC Railroad Company. Table 9 shows revised forecast estimates for the Highway Fund revenue collections projected for fiscal years 2017-18 and 2018-19.

Current Fiscal Year Update

Fiscal year 2017-18 revenue is projected to grow by 0.9% above fiscal year 2016-17 level, but finish the year more than \$20 million below forecast. The underperformance relative to budget is due to licenses and fees revenue, which is projected to end the year 3.1% below budget. Driver licenses fees and International Registration Plan collections have been below expectations. The decline in driver licenses may be due to a decrease in population ages 16-17. However, excise tax revenues are set to finish on budget for the

year as fuel consumption has been tracking close to expectations. Consumption, which is projected to grow 1.2% over fiscal year 2016-17, has been boosted by an increase in real disposable income despite a sharp increase in gas prices.

Fiscal Year 2018-19 Revenue Projections

Total Highway Fund revenue collections in fiscal year 2018-19 are expected to increase above the revised estimates for this fiscal year by 2.5%, but come in 1.0% under budget. The estimates for the excise tax revenues have not been revised as this year's collections have been performing close to expectations. The 3.8% increase year-over-year in the motor fuel tax is expected to hold due to projected stable economic growth and a slight drop in gasoline prices (fuel consumption is expected to grow by 1.1% above current fiscal year). However, the \$22.3 million downward revision next fiscal year to the Highway Fund is driven by a decrease in projected licenses and fees revenues, as expectations of lower performance continue. Licenses and fees revenues are anticipated to drop 3.4% under the budgeted level.

Table 9

Highway Trust Fund Revenue

Revised Estimates for the 2017-19 Biennium

The Highway Trust Fund, established in 1989, receives support from four sources. The primary source is the highway use tax, or sales tax, on vehicle sales. The Highway Trust Fund also receives 29% of the excise tax on motor fuels. The other sources of revenue are fees on various title registrations and interest earned from investments of the Highway Trust Fund cash balances held by the State Treasurer. Table 10 shows revised projections for the Highway Trust Fund revenue collections for fiscal years 2017-18 and 2018-19.

Current Fiscal Year Update

Fiscal year 2017-18 revenue is expected to exceed last year's level by 1.0%, but come in close to \$34 million below the budgeted forecast. High vehicles sales have been declining and the growth in light trucks has subsided as all signs point to ebbing pent-up demand from the recession. Highway use tax revenue is expected to end the year 3.5% under budget, despite a 1.0% increase over fiscal year 2016-17 levels. This loss is unlikely to be offset by motor fuel tax revenues as they are expected to finish the year on budget. Fee revenues are trending in the same direction as highway use tax collections, and are expected to finish the year \$8 million under budget.

Fiscal Year 2018-19 Revenue Projections

Total Highway Trust Fund revenue is expected to increase by 1.9% year-over-year in FY 2018-19, but to drop \$45.3 million under initial projections. This reduction from budget is in large part due to a downward revision in the highway use tax estimate (\$36.3 million below budget levels). Still, highway use tax revenue is anticipated to grow by 1.4% over the current year and fee revenue by 1.3% as the economy continues to expand. Excise tax revenue projections have not been revised and are still expected to grow 3.8% above this year as the economy continues to perform and fuel consumption continues to increase while gas prices drop slightly in fiscal year 2018-19.

Population Dynamics

State Population Is Growing, But Unevenly

At 10.3 million people, North Carolina is the ninth most populous state in the nation. Population growth has remained strong, with the state growing by roughly 738,000 people between 2010 and 2017. During this period, North Carolina experienced the fifth largest numeric growth and added more people than New York, Pennsylvania, and Ohio, combined. North Carolina's growth was surpassed by only Texas, California, Florida, and Georgia.

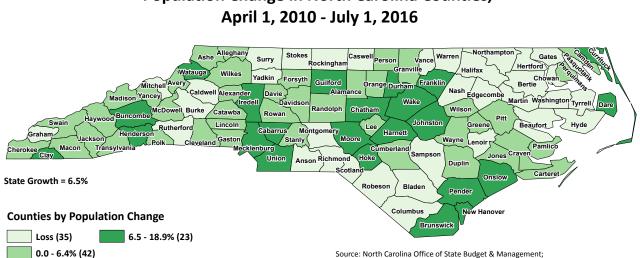

Between July 1, 2018 and July 1, 2019, OSBM projects that the state will grow by an additional 115,000 people, from 10.4 million to 10.5 million people. This is equivalent to adding an entire city slightly smaller than Wilmington to North Carolina. In other words, the state will be adding a net 316 people every day or about 2,220 people every week.

If these trends continue, North Carolina's population will reach 10.6 million people by 2020 - the year in which the next decennial Census is conducted. Given population trends in other states, North Carolina is expected to gain at least one Congressional seat after the 2020 Census enumeration.

But growth has not been distributed equally throughout the state. Between 2010 and 2016, 23 counties grew faster than the state's population growth of 6.5% (Figure 9). These faster growing counties were primarily metropolitan in nature, with much of that growth occurring in the major metropolitan areas of Charlotte and Raleigh-Durham. At the same time, 35 counties lost population – well above the seven counties that lost population in the previous decade. These counties are primarily nonmetropolitan in nature, with the largest concentration located in the northeastern and southern portions of the Coastal Plain.

In the coming years, due to a variety of factors, including an aging population, North Carolina will experience population growth slower than that experienced over the previous two decades. During the 1990s and 2000s, the state grew by 21.3% and 18.5%, respectively. OSBM projections show an expected percentage growth of 11.4% over the current decade – about the rate of growth experienced in the 1960s (and slower than any rate of decadal population growth since the 1860s). North Carolina is pro-

Figure 9

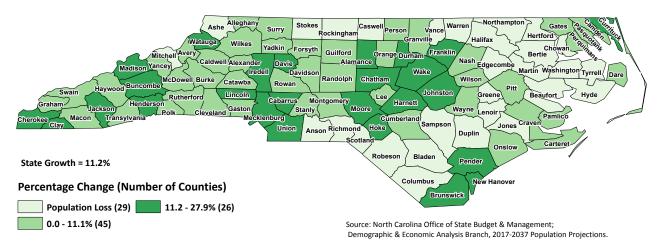

Population Change in North Carolina Counties,

Source: North Carolina Office of State Budget & Management; Demographic & Economic Analysis Branch, Certified Population Estimates, 2016 Vintage jected to add just over 1 million people during this decade – about 500,000 people less than what was added over the previous decade.

In the next ten years (2017-27), OSBM projects that the population of 29 counties will decline while 26 will experience growth faster than the State of North Carolina (Figure 10). With few exceptions, the faster growing counties are located within the major metropolitan areas of the state. Those losing population during this period are mostly non-metropolitan (or rural).

Figure 10

Projected Population Change in North Carolina Counties, 2017 - 2027

Migration Continues to Influence Growth

Beginning in the 1970s, North Carolina's population grew as a result of both natural increase (more births than deaths) and net in-migration (more people moving into the state than leaving). Starting in the 1980s, the majority of North Carolina's population growth has been attributed to net in-migration (Figure 11). Between April 1, 2010 and July 1, 2017, 474,000 net migrants contributed to North Carolina's population growth (accounting for 64.3% of the growth), while an additional 258,000 people were added through natural increase. Of the 474,000 net migrants the Census Bureau estimated, the majority came from other states (69.1%), but at least 147,000 people migrated from abroad. The number of new migrants was surpassed by only Florida, Texas, and California.

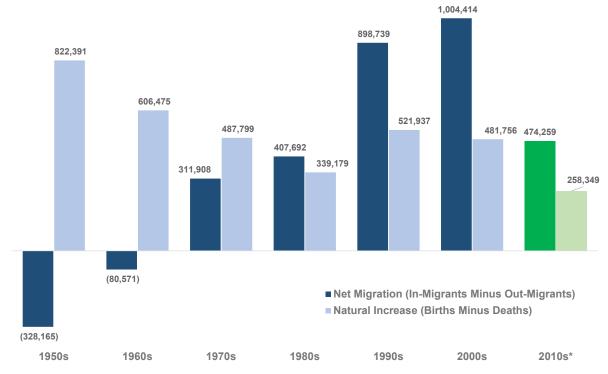

North Carolina has added more net migrants than any of its neighbors. Two of every three of these net migrants moved from another state (domestic migrants). North Carolina was one of only 23 states (including D.C.) with a net gain in state-to-state migrants between April 1, 2010 and July 1, 2017, behind only Florida and Texas.

Over time, the historical migration patterns have helped shape the character of North Carolina and will continue to do so. Only 56.8% of the state's population was born in North Carolina while another 15.0% were born elsewhere in the South (Figure 12). In 2016, 7.8% of the North Carolina population was foreign born (790,000 people). The foreign born have grown from about 5.3% of the North Carolina population in 2000 (430,000 people) to 7.8% (790,000 people) in 2016.

The importance of net migration for population growth is projected to continue due to population aging and long-term declines in fertility rates. Between 2020 and 2030, close to 81% of the state's growth is projected to be derived from net migration.

Net Migration Influences Growth More than Natural Population Increase

North Carolina's Population Is Aging

By 2030, OSBM projects that one in five North Carolinians will be at least 65 years old, and by 2035 there will be more older adults (ages 65+) than children (ages less than 18). The Baby Boom generation began entering the older adult ages at the beginning of this decade, and for the next several years this age group will increase by about 58,000 people a year (Figure 13). OSBM projects that between 2017 and 2037, the older adult population will increase by just over 1 million people (63.3%) to 2.6 million in 2037, and the oldest adults (ages 85+) will more than double from 181,000 in 2017 to 381,000 by 2037.

In the previous decade the working age population (ages 18-64) increased by an average of 91,000 people a year, while in this decade it has so far increased

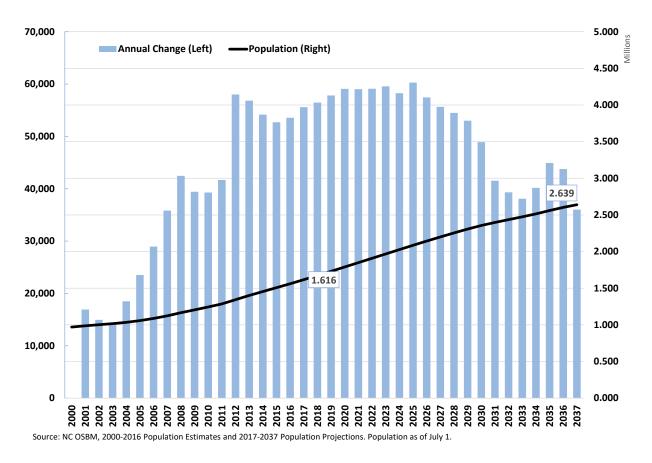

an average of 43,000 people per year (Figure 14). This is due partly to the Baby Boom generation aging into the older age group. OSBM projects that this age group will grow from 6.3 million in 2017 to 7.3 million by 2037, an increase of 982,000 people (15.5%).

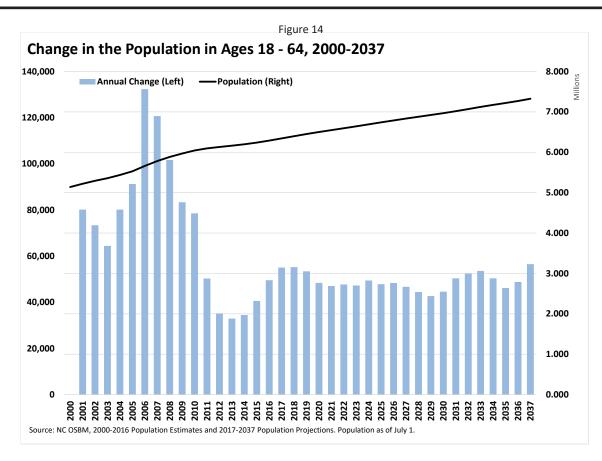

The Great Recession impacted births in North Carolina above and beyond long term downward trends in fertility. As a result, the childhood population in North Carolina has grown much slower than it did prior to the Great Recession. Between 2010 and 2017, this population grew an average of 4,000 people per year (Figure 15). OSBM projects that between 2017 and 2037 this population will grow by 276,000 people (12%).

Household Change

Between 2010 and 2016, household growth in North Carolina has been steady (+212,000 households or +5.8%) but slower than the growth that occurred in the previous decade (about 1.0% annually versus 2.0% annually from 2000-10). There were an estimated 3.9 million households in North Carolina in 2016. At the same time, the number of households with children has declined by an estimated 3,000 households (-0.3%), while the number of households with older adults have increased by 183,000 households (23.4%). These changes are reflected in the change in the number of households with retirement and social security income. In addition, as the economy has improved, there are fewer households in poverty (a decrease of 26,000 or -4.4%).

Census 2020

Preparations for Census 2020 have already started. State, tribal, and local governments are participating in programs to establish accurate residential address and boundary information necessary for conducting the 2020 Census. Leading up to April 1, 2020 (Census Day), communities are also encouraged to develop Complete Count Committees that will partner with the US Census Bureau to promote participation in the 2020 Census. These local investments of time and resources for 2020 Census preparation and promotion will play an important role in making sure every North Carolinian is counted in 2020. In addition to the importance of the Census for determining political representation in Congress and providing complete data for local government services and economic development, an estimated \$16.3 billion in federal funds are distributed annually to North Carolina based directly or indirectly on numbers derived from the decennial census. Another \$1.5 billion in state funds are distributed annually to local municipalities and counties based indirectly on the decennial census.
